

Nordwind

Failure prediction for independent wind fleets.

Seed round, 2026.

The problem

An unplanned gearbox failure costs an operator more than EUR 250,000 per event.

Independent operators run 100 to 500 out-of-warranty turbines without OEM condition monitoring.

Product

Nordwind Sentinel predicts gearbox and main-bearing failures six weeks ahead from SCADA and vibration data.

Built today: Sentinel is live on 340 turbines.

Traction

We currently serve 12 paying customers across Germany and Denmark.

Annual recurring revenue: EUR 1.1 million.

Pilot-to-paid conversion: 9 of 11 pilots.

Business model

EUR 3,200 per turbine per year.

Customer payback in under four months.

Why we keep winning

Every labelled failure improves the model for all customers.

Cross-fleet dataset of 1,900 labelled failure events.

Team

Lena Hartmann, CEO: nine years in Siemens Gamesa service operations.

Jonas Berg, CTO: PhD in condition monitoring, DTU.

Ask and next milestones

Raising EUR 4 million seed.

Next: 1,000 turbines under contract by Q4 2027 and a UK launch.
